Construction, Energy Environment & Sustainability

INTERNATIONAL CONFERENCE

The second edition of the CEES International Conference is taking place in Funchal (Island of Madeira), Portugal, from 27 to 30 June 2023, and is being organized by Itecons in collaboration with CONST-NRC (Canada). The goal of the conference is to bring together professionals from a wide range of backgrounds to work together and address the great challenges facing the existing building stock. Globally, as we face resource scarcity, climate change and increased urbanization, there is a pressing need to move towards a more sustainable construction activity and a more sustainable built environment.

We encourage construction, energy and environment researchers, engineers, planners, stakeholders, policy makers, as well as other experts, to submit an abstract for presentation at CEES 2023. We are looking for research on a wide range of multidisciplinary topics arranged within seven general themes:

Construction materials and technologies; Building physics; Energy; Water and sanitation; Environment; Construction and industry 4.0; Community challenges and policies.

We are also inviting distinguished members of the scientific community to organize special thematic sessions focusing on a topic of their choice that fits in with the general scope of the CEES 2023 conference.

CONFERENCE LOCATION

The CEES 2023 conference will take place in Funchal – Madeira Island, Portugal. Madeira Island is one of Portugal's most appealing destinations and well-known by its mild climate all around the year. The island's location in the warm subtropical climate of the Atlantic, the volcanic mountainous relief, and the rich historical heritage contribute to a remarkable advantage of Madeira Island.

ABOUT ITECONS

Itecons - Institute for Research and Technological Development for Construction, Energy, Environment and Sustainability - is a non-profit organization grounded in the campus of the Faculty of Sciences and Technology of the University of Coimbra established in 2006 to act as a dynamic interface of technology, knowledge and know-how between the scientific community and the industry. We provide applied research, testing, consultancy and training services in the fields of construction, energy, environment and sustainability.
